

This is a detailed weather map of the United States, likely representing a temperature field. The map uses a color gradient to indicate temperature, with cooler temperatures (blue/grey) in the northwest and warmer temperatures (yellow/red) in the southeast. Isotherms (lines of equal temperature) are drawn and labeled with values ranging from 30 to 80. Numerous station temperature readings are plotted across the country, showing a clear latitudinal temperature gradient. The map also includes state boundaries and major geographical features like the Great Lakes and the Gulf of Mexico.
