

The map illustrates the predicted distribution of the invasive plant species *Mimulus aurantiacus* across the United Kingdom. The distribution is shown as a series of small, light green squares, indicating the predicted density of the species in each area. The color scale ranges from 0 (lightest green) to 25 (darkest green) g/kg. The map also shows the boundaries of the United Kingdom, including the English Channel, the Irish Sea, and the North Sea. Major roads are marked with numbers 1 through 7. The legend indicates the predicted density scale.
