

The map displays the spatial distribution of the Mixing Ratio (g/kg) of a specific chemical species across the Iberian Peninsula. The color scale ranges from 0 (light gray) to 25 (dark green). The map shows a general trend of increasing mixing ratio from the coast towards the interior, with values reaching up to 25 g/kg in the central and northern regions. Blue contour lines and black isolines are overlaid on the map, indicating specific concentration levels. The map also shows the coastline and major rivers.
